Extracting Data using API

LATEST SUBMISSION GRADE

100%

1. Using the requests library call the endpoint given in the preceding lab, remember the first few characters of the output: `1 / 1 point`

   ⦿ "rates":

   ○ "CAD"

   ○ "KRW"

   ✓ **Correct**
   correct

   ---

2. **Question 2** In the lab you used the data gathered and turned it into a pandas dataframe. The dataframe should have the Currency as the index and Rate as the columns. Make sure to drop unnecessary columns. What is the correct format of the index and column names? `1 / 1 point`

   ⦿

   ○

3. In the lab, you converted the data into a csv, but he data at the endpoint itself is best describes as:

1 / 1 point

- ◉ JSON
- ○ CSV
- ○ table

3. In the lab, you converted the data into a csv, but he data at the endpoint itself is best describes as:

1 / 1 point

◉ JSON
